

Solar Panel Mounting Instructions

Parts list

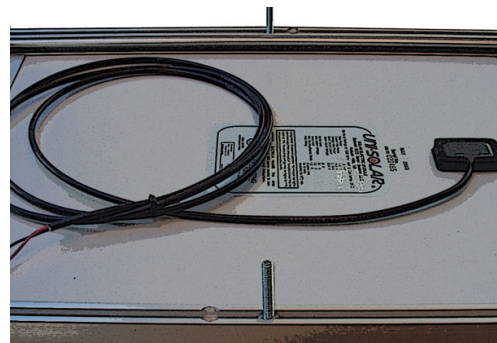

Tools Needed

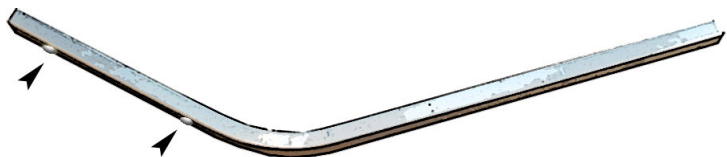

- 1) Drill
- 1) 1/4" Drill Bit

Installation

- 1) Insert the two bolts heads in the holes on the rear frame of the solar panel. Position them to be in line with the center of the solar panel.

- 2) Line up the shorter end of the solar panel rod with the two bolts and mark where you will drill holes. Drill two holes through the solar panel rod using a 1/4" Drill Bit.

- 3) Locate a position that is completely clear of shrubs or tree. Line up the bottom of the solar panel rod with an existing fence or sink a 4x4 in the ground. Mark two holes in the base of the solar panel rod that line up with the object you are mounting the solar panel to. Drill the pole using a $\frac{1}{4}$ " Drill Bit. Use the provided screws to go through the base holes and into the mounting object.

- 4) Line up the solar panel with the top holes in the solar panel rod. Feed the bolts through the holes and tighten the solar panel to the solar panel rod using the provided nuts.
